Valimail Enforce™ Email Authentication

Anti-Impersonation Solution

Modern phishing attacks impersonate your company and bypass traditional filtering mechanisms, costing your organization millions in ensuing security breaches while also wreaking havoc on your brand. These most pernicious phishing attacks can simply be stopped by email authentication.

Built on top of the global open standard DMARC (Domain-based Message Authentication, Reporting & Conformance), Valimail provides the world's only fully automated email authentication solution.

ENFORCEMENT MUST BE THE GOAL

- Stops most pernicious attacks - email impersonation
- Protects the brand
- Improves deliverability

DMARC IS ACCELERATING

Organizations are adopting email authentication protection because it is based on the global standard (DMARC) accessible to everyone, and because it works with 100% certainty when implemented correctly.
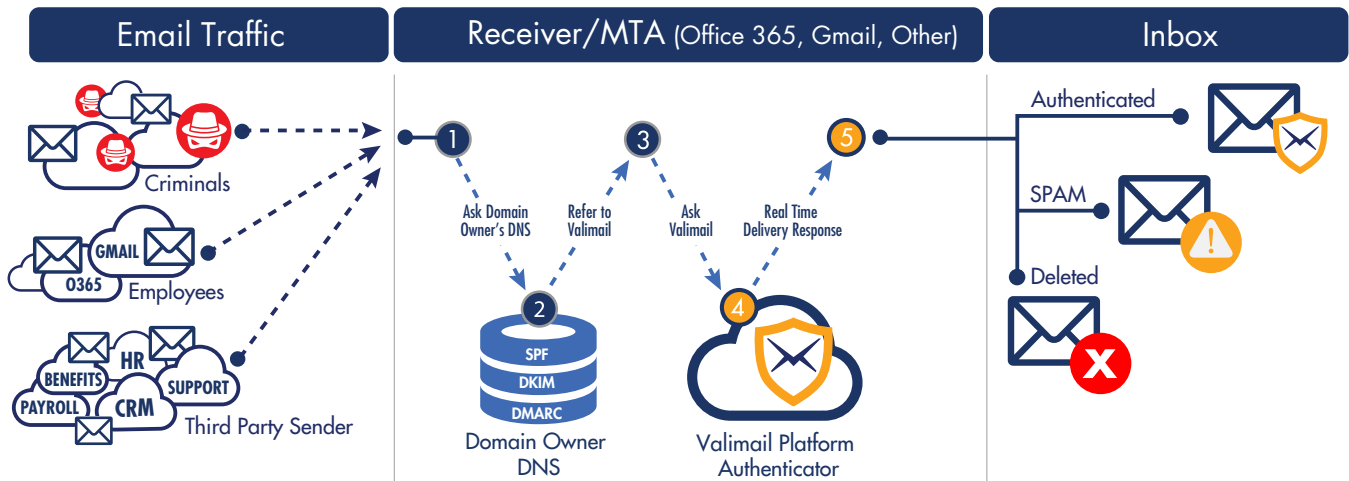

Valimail Automates Email Authentication

Through automation, Valimail addresses the unfortunate fact that over 70 percent of companies fail to overcome the never ending operational challenges of email authentication. Our cloud-based authentication system guarantees customers get to DMARC enforcement and keeps them there. Only Valimail has the patented technology that addresses the organizational and technological hurdles to enforcement; and offers the Valimail Enforcement Guarantee™.

- TRUSTED DOMAIN CLEARINGHOUSE
- ANALYTICS SERVICE
- THREAT INTELLIGENCE
- CONTACT TRUSTLIST
- AUTHENTICATOR
- SERVICE IDENTIFIER
- ENFORCEMENT CONTROLLER

VALIMAIL

Valimail's Patented Technology Guarantees Enforcement

VALIMAIL ENFORCE AUTHENTICATION PROCESS

World's Only Automated Email Authentication Cloud

The Valimail Authentication Responder responds to every authentication request in real time, and ensures that every email sent using your domain name is authorized. Only authorized third-party services can send email on your behalf. Criminal and shadow cloud services are blocked at your email gateway, before reaching your customers' or employees' inboxes.

The Rise of Cloud IT

With Cloud IT, organizations have lost control over their email domains and impersonation attacks have grown rampant.

Email Authentication Stops Attacks

Receiving gateways - whether inside or outside your network - first check your DMARC policy and based on open standards Sender Policy Framework (SPF) and Domain Keys Identified Mail (DKIM) either deliver the email or to block it. This process effectively stops hackers from spoofing your domain name to send fraudulent email globally.

Valimail Cloud Automation

Customers point DMARC, SPF, and DKIM records to Valimail, which in turn dynamically responds to every authentication request error-free and in real time.

Valimail Fully Automated Authentication

Valimail is the only fully automated email authentication service. Our technology powers email authentication for leading brands that want to stop fake emails, protect their brand, and manage shadow email. With Valimail, the onus of DMARC enforcement is on us.

About Valimail   Valimail is the leader in automated email authentication, with a comprehensive platform for anti-impersonation, brand protection, and anti-fraud defense. Valimail's patented, standards-compliant technology provides an unrivaled, fully automated solution for DMARC enforcement to stop phishing attacks, increase deliverability, and protect organizations' reputations. Valimail authenticates billions of messages a month for some of the world's biggest companies, in finance, government, transportation, health care, manufacturing, media, technology, and more. Valimail is based in San Francisco. For more information visit **www.Valimail.com.**
